  - i. Client Id filled by client in online file
  - j. Client address filled by client in online file
  - k. asset information filled by customer and can always be changed later
    - i. country
    - ii. City
    - iii. Neighborhood
    - iv. Street name
    - v. Street number
    - vi. Rooms
    - vii. Meter
    - viii. Floor
    - ix. Requested Price of asset
    - x. Date of access
    - xi. Gush
    - xii. Helka
  - I. Print of id/driver license customer can set if mandatory or not needed and if shown or not shown in the file sign process
  - m. Commission filled by customer can be in letters, numbers or in %
  - n. Specific Notes filled by customer
  - o. General notes Rest is basic text that admin set as mandatory and not changed but customer can change and edit the basic text in file if he like

## 32. API SMS DETAILS FOR INTEGRATION:

- a. Link method post
- b. Link https://www.sms4free.co.il/ApiSMS/SendSMS
- c. Key 5rJzIqL7h
- d. User 0528919345
- e. Pass 60796364
- f. sender nadlanpro.co.il
- g. recipient the phone of the clients
- h. msg the massage that will be sent to clients
- 33. API SMS For calling the service to know the package status:
  - a. Link method post
  - b. Link https://www.sms4free.co.il/ApiSMS/SendSMS

- c. Key 5rJzIqL7h
- d. User 0528919345
- e. Pass 60796364

# SECOND PRODUCT ON PAGE — (Gargir)

- 34. **General description** we need CRM system with website for making the purchase of apartments from contractors simpler by making one system to manage all the project needs. Clients that buy apartments need place to track the project and the payments they made for the house they bought.
- 35. **Fast brief** develop system with website that manage the communication between the home buyers to the contractor seller.
- 36. **Deep brief** people buy home directly from contractor. They need to have communication for upload files, chat, email, check files and statuses, payments history made, the system should solve this in one place.
- 37. Website and system will be in Hebrew, but it can be developed in English (website and dashboard need to be able to accept Hebrew all text need to be set in admin dashboard)
- 38. Currency needs to be in ILS or USD or EUR (admin decide per contractor)
- 39. Boxes in all dashboard need to be in light colors and dashboard should be in light purple and the entire website and colors of all dashboard should have the light purple and purple colors mainly
- 40. Website and dashboards need to be responsive

- 41. Create app for IOS and android that open the login page and then the dashboards of Gargir. Apps should be responsive and fast for IOS and for android and it should show the dashboards per user type that login
- 42. **Home page** one pages slider with sections that describe the system. It need to show progress of system in the page like (contractors, projects, clients)
- 43. Login page for admin, contractor, worker, and client
  - a. admin the website owner
  - b. Contractor can have several projects.
  - c. Worker per project or several projects that belong to the contractor.
  - d. Client per project view
- 44. Each user login with his email/phone (password is individual)
- 45. Let admin edit all text in one place for the whole system so he will be able to change the text to Hebrew in one section in admin
- 46. Please note that client can be added to several contractors and the UID will be his phone number
- 47. When contractor create project, he assigns workers into it, the workers or the contractor add the project details and then when people buy apartments from the contractors, they are added to the project so they can view it per their apartment

# 48. Adding project by contractor:

- a. Add project description
- b. Add project address

- c. Add project manager details for contact
- d. Add project number of apartments and prices for each
- e. Add images of project
- f. Assign workers to the project

## 49.Add buyer to project:

- a. Which apartment assigned
- b. Which garage assign
- c. Price signed
- d. Price paid till now

#### 50.admin dashboard:

- a. in dashboard see info in clickable boxes:
  - i. total income this month (total money paid from contractors to admin this month as they pay monthly fee)
  - ii. total income this year (total money paid from contractors to admin this year as they pay monthly fee)
  - iii. total income lifetime (total money paid from contractors to admin this lifetime as they pay monthly fee)
  - iv. total contractors (how many contractors are in system)
  - v. total projects (total of projects for all contractors together)
  - vi. total money managed (total of money from projects raised)
- b. view all contractors
- c. can set for each contractor:
  - i. his monthly price
  - ii. how many projects allowed
  - iii. his full name
  - iv. phone
  - v. email
  - vi. address
  - vii.payment method (dropdown option)
- d. For each contractor see his workers and clients
  - i. Let admin have option to fully manage them
- e. See total income from contractor
  - i. See specific details from contractor of payments
  - ii. Payment history per month and price
  - iii. Total paid lifetime
  - iv. Total paid this year
- f. Add, edit, delete, suspend, activate, for each contractor
- g. Have all permissions of all users in the system from the admin panel

- h. Manage website text admin can change the whole website and all dashboard text in one place
- i. Add, edit, delete, suspend, activate contractors
- j. Add, edit, delete, suspend, activate workers
- k. Add, edit, delete, suspend, activate clients

#### 51. Contractor dashboard:

a. in dashboard see info in clickable boxes:

- i. total projects
- ii. total workers
- iii. total clients
- iv. total money earned lifetime
- v. total money earned yearly
- vi. total money earned monthly
- b. contractor can see per project the dashboard information as well like in section above
- c. fully manage workers
- d. fully manage clients
- e. can create project and set his details and details can be changed
- f. contractor can see and do all that worker do
- g. Add, edit, delete, suspend, activate workers
- h. Add, edit, delete, suspend, activate clients

#### 52. Worker dashboard:

- a. See in dashboard his connected projects in clickable boxes
- b. Calendar management that is also connected to the clients
- c. Can check each project specifically and set details
- d. In each project how many apartments and price per apartment
- e. When client buy apartment, it assigns to him with his details and prices signed and price paid
- f. Can see per project all the apartments in clickable boxes
- g. When click on apartment box it led to the apartment details and who bought the apartment
- h. When worker see the clickable boxes of apartment, he can see what sold and what available
- i. Can see in dashboard how much money raised per project and how much money have in debt (the delta between price signed and price paid). He can see it per the entire contractor projects, per specific project, and per specific apartment in project. It will be in boxes

- j. Add, edit, delete, suspend, activate clients
- k. Contact clients by email per project

#### 53. Client dashboard:

- a. In main dashboard client see in clickable boxes his projects that he assigns to]
- b. When click on the box it will show the apartments that the client assigns to per project in clickable boxes
- c. When click on specific apartment client will see in boxes details:
  - i. Project status (the project status. Set by worker or contractor)
  - ii. Apartment status (the Apartment status. Set by worker or contractor)
  - iii. Price signed (Set by worker or contractor)
  - iv. Prices paid (Set by worker or contractor)
  - v. Price left to pay (Set by worker or contractor)
  - vi. Important files
- d. Client can see per project in sections menu on the right side:
  - 1. Project details
    - a. All the details of the project
    - b. Expected Delivery date
    - c. Project status
  - 2. Apartment details the apartment bought
  - 3. Contract and terms
  - 4. Payments (can see his payment history)
    - a. When he pays a voucher, he set it manually and with status pending, worker will approve it and it will be with status approved and then update on the prices dashboard and added to paid
    - b. Each row has status that worker manage but client can add rows and worker need to approve them and then it will be added to the dashboard calculation)
    - c. See invoices and receipts
  - 5. Changes Approvals (worker upload approval files for client)
    - a. Main offer
    - b. Report of changes
    - c. Tracking on changes

- 6. Apartment changes (client upload approval files for worker)
- 7. Client files (files that client signed, it uploads by worker)
- 8. Project main files (uploaded by worker or contractor)
- 9. Important alerts (worker create alert and it will appear here)
- 10. Contact with project open tickets (when sent it will send email to worker with the request) and also check previous tickets

## **54. General important Notes:**

- a. Important to make sure that website and all dashboards are fully responsive and upload fast
- b. Logo design and website design should be on the developer responsible
- c. Dashboard design should be on the developer responsible
- d. client can click to view files or to download them
- e. client can send files to any email he wants
- f. when client is added to the project, he will get email notification with login information:
  - i. login first time will be with email/phone and 6-digit password
  - ii. client can change to any password he wants
  - iii. all users' types can reset password
  - iv. login to all users can be with email or phone as username
- g. important that boxes of all users will be responsive and will be clickable to relevant section
- h. main admin can add more sections to be shown to clients
- i. contractor should have in his dashboard fast view to all his projects and each project should have status:
  - i. planning
  - ii. building
  - iii. completed
- j. the contractor should have payment section where he can see statuses of his earning in total and per project and it need to be in boxes, and he can also click on it and see per clients per project what are the payment details
- k. when client goes and pay voucher of the apartment, he will add row in payment that this row addon will send email notification to the email of the worker so he can check and verify the payment and approve it. All payments need to have statuses to follow. When status of payment changed by worker it will send email notification to client with the update
- I. workers need to have option to email all the clients of the project from the system with project updates
- m. when project status changed all the clients of the project will get email notification (decided by the contractor when he change the status if to update clients)
- n. admin should see history of all payments per contractor
- o. contractor/worker should see history of all payments per client

- p. the contractors pay admin by those types of options (in admin panel per contractor it should show the payment method chosen in dropdown):
  - i. check
  - ii. wire transfer

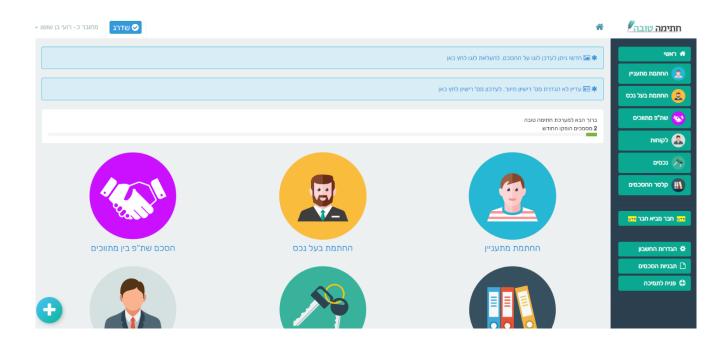

- iii. cash
- iv. credit card
- v. PayPal
- q. Website home page sections in scroll should be:
  - i. Main banner + contact form
  - ii. Marketing email
  - iii. System features
  - iv. System description
  - v. Contact form
  - vi. Footer
- r. All dashboards should be RTL (the menu on the right side)
- s. Example for dashboard view structure:
  <a href="https://html.psdtohtmlexpert.com/admin/aqua-admin-template/html/main-rtl/index-2.html">https://html.psdtohtmlexpert.com/admin/aqua-admin-template/html/main-rtl/index-2.html</a>

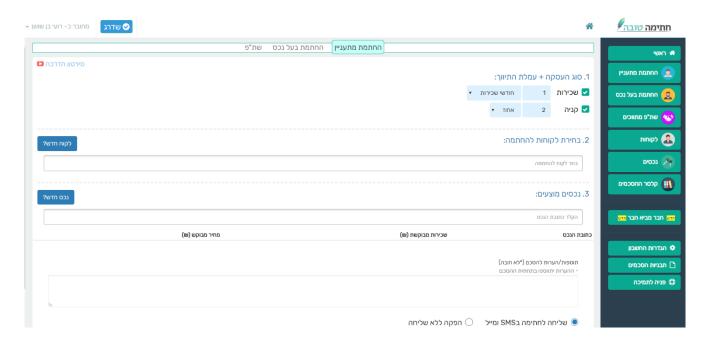

https://preview.themeforest.net/item/aqua-responsive-admin-template-dashboard-web-

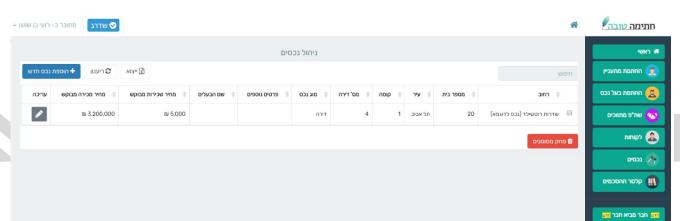

apps/full screen preview/29480235? ga=2.82335190.1197377946.161347070 9-2041436324.1609851015

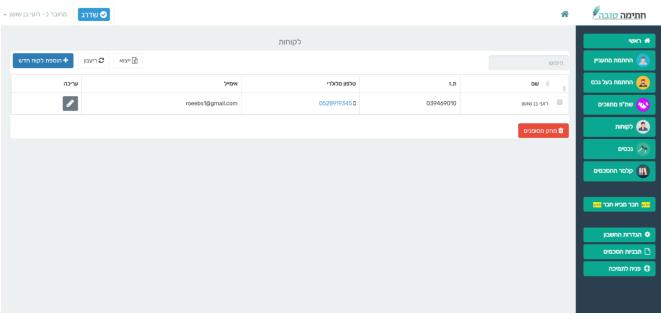

- t. Status of the project is set by worker and contractor and it effect in client dashboard. All other statuses as well will affect the same
- u. Design should be simple but impressive and easy to understand and use
